

L & J ARBOUIN TESTIMONIAL

To Whom It May Concern,

During a career in the building industry spanning forty-five years, we have probably experienced every type of framing used in housing over the decades. After some bad experiences with steel framed "kits" in the eighties we used other materials in our jobs until the late nineties when our contracts specified steel framed houses and/or trusses. We chose a local company, Homefab, as our preferred supplier.

The quality of their product and the level of service provided throughout the planning and building phase of several homes was consistently well above average. The staff contacted us regularly to make sure there were no problems and were always available to talk to us if we did have a query. We were so impressed by the ease of construction and the perfectly straight lines of the finished job that we chose Homefab to supply the complete framework for our own retirement home. As expected, we are extremely happy with the results and can rest easy knowing it is also termite proof.

Congratulations and thank you Silvano, Selo and Lara and all of the team for a job well done.

Regards

Lawrie and Julie Arbouin

PS Not the slightest movement or rattle occurred in our house during Cyclone Larry – while 30m tall trees were uprooted all around us. Our Homefab home is rock solid!!
